During the first group meeting (February 18), we made it a point for all team members to give a brief overview of their programming experience and domain knowledge. Based on this, the team collectively agreed on the team roles moving forward. We decided that for the sake of clarity and reducing complexity, we would fix the member roles for the duration of the project. But we also took the Professor's suggestion, regarding each member assuming the role of SCRUM master and Note-taker at least once, into account.

Below are the roles when it comes to the meetings:

- **Shaher:** SCRUM master
- **Judah:** Note-taker

Below are the roles with regards to the software:

Front-End Team (UI, web mockups):

- **Pranav** - Technical Lead
- **Balsher**

Back-End Team (functionality, features):

- **Shaher** - Technical Lead
- **Prabin**
- **Yaser**
- **Judah**

Documentation Team (requirements gathering, specifications, process outlines):

- **Judah**
- **Prabin**
